Many students like to take ayku tests, thanks to which they can find out how high their intelligence is. In this section, gamers will be able to pass one of the options for such a test. If the first time the result is not very favorable, you can always work out and go all over again. Any developing game, especially with a mathematical bias, is distinguished by its brightness and excitement. Also, for quick orientation in numbers, you can play Russian Lotto, which has been relevant for a very long time. Not one generation of children attracts attention this game. The leader takes out the barrels with numbers, and the player on his cards looks at this figure, if it was found, then it can be crossed out, removing all fields from the card the participant wins. You can do mathematics together with cartoon characters that everyone loves, among them the curious Peppa Pig, Smeshariki, Fixiki, Barboskina and even the princesses.

Many flash drives can not only teach counting, add and subtract, multiply and divide, you can develop logic, thinking, imagination, as well as memory. In this section, the guys will be able to find many exciting applications that will not only teach you something new, but also have fun. Each flash drive contains fascinating tasks, puzzles, logical puzzles, and you may not even notice that this game is filled with learning moments.

When choosing an application, it is worth considering the age category, it will be difficult for kids to add and subtract if they are not familiar with these phenomena. But it will be too easy and boring for schoolchildren to play games that teach counting. In order for the applications to be useful and at the same time fascinating, you need to carefully select the games, taking into account age and even interest.
